SUMMARY

Microbiology Laboratory uses diverse variety of instruments. During the course of time it has been observed that many of the students lack proper handling efficacy. With the view of this fact, a value added program was organized intended to train the participants for various instruments like microscope, colorimeter, electrophoresis, centrifuge etc., they were also made aware about how proper handling of all the instruments will contribute in research work in future.

Dr. Shubhrajya Pandey was the course coordinator and Prof. Volga Vyas and Prof. Niraj Soni were the course faculty. Program was successfully completed by the due time 36 hours with constant cooperation faculties, and lab attendant and enthusiastic students. We were co-operated in the lab work by Prakash Suryavanshi.

ESSENTIAL ADVANCED CHEMISTRY LAB SKILLS**

Session 2022-23

Department of Chemistry D.P.Vipra College Bilaspur CG

Open to: B.Sc.1st Students

Duration:32 hours

OBJECTIVE OF THE PROGRAMME

The competency-based learning approach provides a means for learners to practice and acquire clinical skills and upgrade their knowledge. It allows facilitators to demonstrate the correct steps and gives an opportunity for repetition and feedback to the learners.

Laboratory classes can be used by any instructor who wishes to create an environment where students are physically engaged with concepts in the field through active experimentation or exploration. Laboratory safety is an essential part of ensuring the health and safety of workers and researchers in laboratory settings. Laboratories can be hazardous environments with various potential risks, including chemical spills, fires, explosions, and exposure to hazardous substances.

Some lab skills include creating a hypothesis, record keeping, dissection, pipetting, measuring, lab safety, molecular cloning, and the ability to sterilize equipment. The science learning goals of laboratory experiences include enhancing mastery of science subject matter, developing scientific reasoning abilities, increasing understanding of the complexity and ambiguity of empirical work, developing practical skills, and increasing understanding of the nature of science.

COURSE OUTLINE

During skills lab training, learners commonly practice the procedural skills' psychomotor component under the trainers' instruction, who have previously demonstrated the relevant skill. Subsequently, the skills are then performed by the learners themselves under supervision.

Laboratory teaching assumes that first-hand experience in observation and manipulation of the materials of science is superior to other methods of developing understanding and appreciation. Laboratory training is also frequently used to develop skills necessary for more advanced study or research.

The laboratories are important in college as it help to improve the learning of students. For better learning, laboratories are important to develop at college. Science experiments and computer practical is important for college students.

A lab manual usually contains exercises that help the students familiarize themselves with the facilities, equipment, chemicals, glassware, instruments used for measurement, and specimens available in a school science laboratory.
